

2W isolated DC-DC converter with 4.2k VAC/6k VDC  
Fixed input voltage and unregulated single or dual  
output

**FEATURES**

- SIP package
- High efficiency up to 84%
- Reinforced insulation
- Patient leakage current 2μA max.
- I/O isolation test voltage 4.2k VAC or 6k VDC
- Operating ambient temperature: -40°C to +85°C
- Internal surface mounted design
- Industry standard pin-out
- EN60601-1, ANSI/AAMI ES60601-1 approved (1xMOPP/2xMOOP)

G\_S-2WR2 & H\_S-2WR2 series meets reinforced insulation requirements. They are especially designed for applications where extremely high isolation, low insulation capacitor with low leakage current in a compact package size is required. They are widely used in applications such as medical, electrical grid, IGBT driver circuits and similar where:

1. The voltage of the input power supply is relatively stable with a variation of ±10%Vin or less;
2. An extremely high input to output isolation voltage of up to 4200VAC or 6000VDC is required;
3. The requirement for ripple & noise or a tight output regulation is not as strict.

## Design Reference

### 1. Typical application

Input and/or output ripple can be further reduced, by connecting a filter capacitor from the input and/or output terminals to ground as shown in Fig.3.

Choosing suitable filter capacitor values is very important for a smooth operation of the modules, particularly to avoid start-up problems caused by capacitor values that are too high. For recommended input and output capacitor values refer to Table 1.

For a tight output voltage regulation, including overvoltage, overcurrent and over temperature protection, we recommend the use of a linear regulator that is connected in series to the input and/or output terminals as shown in Fig. 4.

Table 1: Recommended input and output capacitor values

V <sub>in</sub> (VDC)	C <sub>in</sub> (μF)	Single V <sub>out</sub> (VDC)	C <sub>out</sub> (μF)	Dual V <sub>out</sub> (VDC)	C <sub>out</sub> (μF)
5	10	5	10	±5	4.7
12/15	4.7	12	2.2	±9	2.2
24	2.2	15	1	±12/±15	1

2. EMC (CLASS B) compliance circuit

Table 2: Recommended EMC filter values

Input voltage (V)		5/12/15	24
EMI	C1, C2	4.7μF /50V	
	C3	Refer to the Cout in Fig.3	
	LDM	6.8μH	15μH

Note: C1 and C2 of G1515S-2WR2 is 10μF/25V, LDM of G1515S-2WR2 is 22μH.

3. Output load requirements

For a reliable and efficient operation of the converter, the minimum load should never be less than 10% of the rated output load. If the total required output power is below 10%, a parallel bleeding resistor is required on the output, ensuring that the sum of the power consumption is always maintained at 10% minimum.

1. For additional information on Product Packaging please refer to [www.mornsun-power.com](http://www.mornsun-power.com). Packaging bag number: 58200013;
2. In order to guarantee product performance and datasheet compliance, the product must be operated within specifications and load range requirement;
3. The maximum capacitive load offered were tested at input voltage range and full load;
4. Unless otherwise specified, parameters in this datasheet were measured under the conditions of  $T_a=25^{\circ}\text{C}$ , humidity<75%RH with nominal input voltage and rated output load;
5. All index testing methods in this datasheet are based on company corporate standards;
6. We can provide product customization service, please contact our technicians directly for specific information;
7. Products are related to laws and regulations: see "Features" and "EMC";
8. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units.
