

E01-2G4M13S User Manual

NRF24L01P 2.4GHz SMD Wireless Module

1 Overview

1.1 Introduction

E01-2G4M13S is a wireless serial port module (UART) based on Nordic's NRF24L01P RF chip, working in 2.4ghz with built-in PCE antenna.

Since chip nRF24L01P is used to ensure compatibility, the power amplifier (PA) and low noise amplifier (LNA) are built on the original basis the maximum transmit power reaches 20mW and the receiving sensitivity is further improved. Communication stability is greatly improved compared to products without power amplifiers and low noise amplifiers. A large number of domestic Si24R1s are used in the market to pretend to be nRF24L01P produced by NORDIC. it is recommended that the user tests the communication stability and distance under the real use scenario and the difference is very obvious. Industrial grade high precision 16MHz crystal is used. This product has obtained domestic and international authoritative certification such as FCC, CE, RoHS, etc.

Since the E01-2G4M13S is a SPI RF transceiver module, you need to use the MCU driver or a dedicated SPI debugging tool.

1.2 Features

- Communication distance tested is up to 800m;
- Maximum transmission power of 20mW, software multi-level adjustable;
- Support the global license-free ISM 2.4GHz;
- Support air data rate of 2Mbps,1Mbps and 250kbps;
- 125 communication channels to meet the needs of multi-point communication, grouping, frequency hopping, etc.;
- Connect to the MCU through the SPI interface at a rate of 0 ~ 10Mbps;
- Support 2.0V~3.6V power supply, power supply over 3.3V can guarantee the best performance;
- Industrial grade standard design, support -40 ~ 85 °C for working over a long time;
- Onboard PCB antenna, no need to connect external antenna;
- Enhanced ShockBurst, fully compatible with nRF24L, nRF24E, nRF24U series of NORDIC.

1.3 Application

- Home security alarm and remote keyless entry;
- Smart home and industrial sensors;
- Wireless alarm security system;
- Building automation solutions;
- Wireless industrial-grade remote control;
- Health care products;
- Advanced Meter Reading Architecture(AMI);
- Automotive industry applications.

2 Specification and parameter

2.1 Limit parameter

Main parameter	Performance		Remark
	Min.	Max.	
Power supply (V)	0	3.6	Voltage over 3.6V will cause permanent damage to module
Blocking power (dBm)	-	10	Chances of burn is slim when modules are used in short distance
Operating temperature (°C)	-40	85	/

2.2 Operating parameter

Main parameter		Performance			Remark
		Min.	Typ.	Max.	
Operating voltage (V)		2.0	3.3	3.6	≥ 3.3 V ensures output power
Communication level (V)			3.3		For 5V TTL, it may be at risk of burning down
Operating temperature (°C)		-40	25	85	Industrial design
Operating frequency (MHz)		2.4	-	2.525	Support ISM band
Power consumption	TX current (mA)	-	38	-	Instant power consumption
	RX current (mA)	-	16.8	-	
	Sleep current (μ A)	-	1.2	-	Software is shut down
Max Tx power (dBm)		12.5	13	13.5	
Receiving sensitivity (dBm)		-97	-98	-99	Air data rate is 250 kbps
Air data rate (bps)		250k	250k	2M	Controlled via user's programming

Main parameter	Description	Remark
Distance for reference	800m	Test condition : clear and open area, antenna gain: 5dBi, antenna height: 2.5m, air data rate: 250kbps
FIFO	32 Bytes	Max. Transmitting length per packet
Crystal frequency	16MHz	
Modulation	GFSK	
Package	SMD	
Connector	1.27mm	
Communication interface	SPI	0-10Mbps
Size	14 * 23 mm	PCB antenna included
Antenna	PCB antenna	50 ohm impedance

3 Size and pin definition

Pad quantity : 10
Unit: mm

No.	Name	Direction	Function
1	VCC	Power supply	Power supply : 2.0~ 3.6V DC
2	CE	Input	Chip enable
3	CSN	Input	SPI Chip select
4	SCK	Input	SPI Clock
5	MOSI	Input	SPI master output slave input
6	MISO	Output	SPI master input slave output
7	IRQ	Output	Interrupt request, valid in low communication level
8	GND		Ground
9	GND		Ground
10	GND		Ground

4 Basic operation

4.1 Hardware design

- It is recommended to use a DC stabilized power supply. The power supply ripple factor is as small as possible, and the module needs to be reliably grounded.;
- Please pay attention to the correct connection of the positive and negative poles of the power supply. Reverse connection may cause permanent damage to the module;
- Please check the power supply to ensure it is within the recommended voltage otherwise when it exceeds the maximum value the module will be permanently damaged;
- Please check the stability of the power supply, the voltage can not be fluctuated frequently;
- When designing the power supply circuit for the module, it is often recommended to reserve more than 30% of the margin, so the whole machine is beneficial for long-term stable operation.;
- The module should be as far away as possible from the power supply, transformers, high-frequency wiring and other parts with large electromagnetic interference.;
- High-frequency digital routing, high-frequency analog routing, and power routing must be avoided under the module. If it is necessary to pass through the module, assume that the module is soldered to the Top Layer, and the copper is spread on the Top Layer of the module contact part(well grounded), it must be close to the digital part of the module and routed in the Bottom Layer;
- Assuming the module is soldered or placed over the Top Layer, it is wrong to randomly route over the Bottom Layer or other layers, which will affect the module's spurs and receiving sensitivity to varying degrees;
- It is assumed that there are devices with large electromagnetic interference around the module that will greatly affect the performance. It is recommended to keep them away from the module according to the strength of the interference. If necessary, appropriate isolation and shielding can be done;

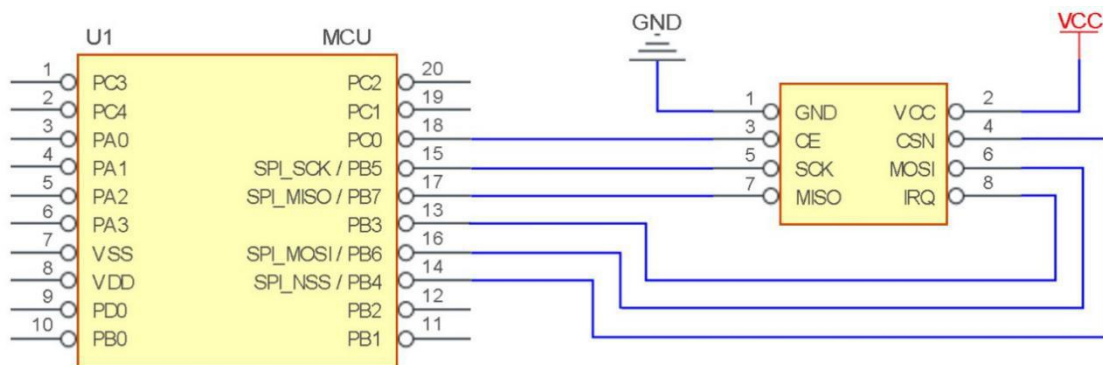

- Assume that there are traces with large electromagnetic interference (high-frequency digital, high-frequency analog, power traces) around the module that will greatly affect the performance of the module. It is recommended to stay away from the module according to the strength of the interference. If necessary, appropriate isolation and shielding can be done.
- If the communication line uses a 5V level, a 1k-5.1k resistor must be connected in series (not recommended, there is still a risk of damage);
- Try to stay away from some physical layers such as TTL protocol at 2.4GHz , for example: USB3.0;
- Onboard PCB antennas should avoid conductors or other sources of interference.

4.2 Software editing

- Insert the module on the user's circuit board, use the microcontroller to communicate with the module via SPI or serial port, and operate the control register and the transceiver buffer through the SPI command to complete the wireless data transmitting and receiving function. For the timing operation of the read and write operations for the module register, please refer to the latest nRF24L01P data sheet.
- IRQ is an interrupt pin, which can be used to wake up the microcontroller and achieve fast response. If it is not connected, the SPI query mode can be used to obtain the interrupt status (not recommended, which is not conducive to the overall power consumption, and the efficiency is not enough);
- CE can be connected to a high level for a long time, but the module must first be set to the POWER DOWN mode when writing the register. It is recommended that the CE be controlled by a MCU pin.

6 FAQ

6.1 Communication range is too short

- The communication distance will be affected when obstacle exists.
- Data lose rate will be affected by temperature, humidity and co-channel interference.
- The ground will absorb and reflect wireless radio wave, so the performance will be poor when testing near ground.
- Sea water has great ability in absorbing wireless radio wave, so performance will be poor when testing near the sea.
- The signal will be affected when the antenna is near metal object or put in a metal case.
- Power register was set incorrectly, air data rate is set as too high (the higher the air data rate, the shorter the distance).
- The power supply low voltage under room temperature is lower than 2.5V, the lower the voltage, the lower the transmitting power.
- Due to antenna quality or poor matching between antenna and module.

6.2 Module is easy to damage

- Please check the power supply source, ensure it is 2.0V~3.6V, voltage higher than 3.6V will damage the module.
- Please check the stability of power source, the voltage cannot fluctuate too much.
- Please make sure antistatic measure are taken when installing and using, high frequency devices have electrostatic susceptibility.
- Please ensure the humidity is within limited range, some parts are sensitive to humidity.
- Please avoid using modules under too high or too low temperature.

6.3 BER(Bit Error Rate) is high

- There are co-channel signal interference nearby, please be away from interference sources or modify frequency and channel to avoid interference;
- Poor power supply may cause messy code. Make sure that the power supply is reliable.
- The extension line and feeder quality are poor or too long, so the bit error rate is high;

7 Production guidance

7.1 Reflow soldering temperature

Profile Feature	Curve characteristics	Sn-Pb Assembly	Pb-Free Assembly
Solder Paste	Solder paste	Sn63/Pb37	Sn96.5/Ag3/Cu0.5
Preheat Temperature min (T _{smin})	Min preheating temp.	100°C	150°C
Preheat temperature max (T _{smax})	Mx preheating temp.	150°C	200°C
Preheat Time (T _{smin} to T _{smax})(ts)	Preheating time	60-120 sec	60-120 sec
Average ramp-up rate(T _{smax} to T _p)	Average ramp-up rate	3°C/second max	3°C/second max
Liquidous Temperature (TL)	Liquid phase temp.	183°C	217°C
Time (t _L) Maintained Above (TL)	Time below liquid phase line	60-90 sec	30-90 sec
Peak temperature (T _p)	Peak temp.	220-235°C	230-250°C
Aveage ramp-down rate (T _p to T _{smax})	Aveage ramp-down rate	6°C/second max	6°C/second max
Time 25°C to peak temperature	Time to peak temperature for 25°C	max 6 minutes	max 8 minutes

7.2 Reflow soldering curve

8 E01 Series

Model No.	RFIC	Frequency	TX power	Distance	Package	Antenna
		Hz	dBm	km		
E01-ML01S	nRF24L01P	2.4G	0	0.1	SMD	PCB
E01-ML01D	nRF24L01P	2.4G	0	0.1	DIP	PCB
E01-ML01PX	nRF24L01P	2.4G	0	0.2	SMD	IPEX
E01-2G4M13S	nRF24L01P	2.4G	13	0.8	SMD	PCB
E01-ML01DP4	nRF24L01P	2.4G	20	1.8	DIP	PCB
E01-ML01DP5	nRF24L01P	2.4G	20	2.5	DIP	SMA-K
E01-ML01SP2	nRF24L01P	2.4G	20	1.8	SMD	PCB/IPEX
E01-ML01SP4	nRF24L01P	2.4G	20	2	SMD	IPEX
E01-2G4M27D	nRF24L01P	2.4G	27	5	DIP	SMA-K

All E01 series module are compatible with each other.
