

PWB_ZP- 3WR2 Series

3W,4:1 WIDE INPUT, ISOLATED & REGULATED SINGLE OUTPUT, DC-DC CONVERTER

Patent Protection RoHS

FEATURES

- 4:1 wide input voltage range
- DIP Package
- Efficiency up to 83%
- 1.5KVDC isolation
- Short Circuit Protection(automatic recovery)
- Operating Temperature Range: -40°C ~ +85°C
- Meet CISPR22/EN55022 CLASS A

PART NUMBER SYSTEM

PWB2405ZP-3WR2

APPLICATION

The PWB_ZP-3WR2 Series are specially designed for applications where a wide range input voltage power supplies are unregulated from the input power supply in a distributed power supply system on a circuit board.

These products apply to where:

- 1) Input voltage range $\leq 4:1$;
- 2) 1.5KVDC input and output isolation;
- 3) Output regulated and low ripple noise is required.

TEST CONFIGURATIONS

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor L_{in} and Capacitor C_{in} to simulate source impedance.

DESIGN CONSIDERATIONS

1) Requirement on output load

To ensure this module can operate efficiently and reliably, during operation, the minimum output load could not be less than 5% of the full load. otherwise ripple maybe increase dramatically. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, suppose to use the resistance of 5% rated power, or use our company's products with a lower rated output power.

2) Recommended circuit

All the PWB_ZP-3WR2 Series have been tested according to the following recommended testing circuit before leaving factory (see Figure 5).

If you want to further decrease the input/output ripple, you can increase a capacitance properly or choose capacitors with low ESR. However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. The safe and reliable operation is ensured, the greatest capacitance of its filter capacitor must be less than the Max. Capacitive Load.

General: C_{in} : 10μF~47μF
 C_{out} : 10μF/100mA

3) Input current

When it is used in unregulated power supply, be sure that the fluctuating range of the power supply and the rippled voltage do not exceed the module standard. Input current of power supply should afford the flash startup current of this kind of DC/DC module (Figure 6).

General: V_{in} :24V I_p =640mA
 V_{in} :48V I_p =320mA

(Figure 6)

4) Cannot use in parallel and hot swap

Note:

1. Min. load shouldn't be less than 5%, otherwise ripple maybe increase dramatically. Operation under minimum load will not damage the converter, however, they may not meet all specification listed.
2. All specifications measured at $T_a=25^{\circ}\text{C}$, humidity<75%, nominal input voltage and rated output load unless otherwise specified.
3. Max. Capacitive Load tested at input voltage range and full load.
4. In this datasheet, all the test methods of indications are based on our corporate standards.
5. All characteristics are for listed model, non-standard models may perform differently, please contact our technical person for more detail.
6. Contact us for your specific requirement.
7. Specifications subject to change without prior notice.
