- 1) Corresponds to the peak inrush current on initial actuation (motor).
- 2) The load in the table excludes flasher. When applied in flasher, a special silver alloy (AgSnO₂) contact material should be used and the customer special code should be (170) as a suffix. Please heed the anode and cathode's request when wired, terminal 30 should connect with anode.
- 3) The load wiring diagrams are listed below:

CHARACTERISTIC CURVES

1. Coil operating voltage range

- 1) The curve is applicable under the condition of no contact load applied.
- 2) The operating voltage is connected with coil energized time and voltage. After energized, the operating voltage will increase.
- 3) The maximum allowable coil temperature is 180°C. For the coil temperature rise which is measured by resistance is average value, we recommend the coil temperature should be below 170°C under the different application ambient, different coil voltage and different load etc.
- 4) If the actual operating coil voltage is out of the specified range, please contact Hongfa for further details.

2. Load limit curve

- 1) The contact load is resistive.
- 2) The load and electrical endurance tests are made according to "CONTACT DATA" parameters' table. If actual load voltage, current, or operate frequency is different from "CONTACT DATA" table, please arrange corresponding tests for confirmation.

3. Ambient temperature curve of the electrical endurance test

- 1) The minimum temperature is -40°C.
- 2) The maximum temperature is 105°C.
