3. General Description

The WRF1231H is a highly integrated RF transceiver capable of operation over a wide frequency range, including the 433, 868 and 915 MHz license-free ISM (Industry Scientific and Medical) frequency bands. Its highly integrated architecture allows for a minimum of external components whilst maintaining maximum design flexibility. All major RF communication parameters are programmable and most of them can be dynamically set. The WRF1231H offers the unique advantage of programmable narrow-band and wideband communication modes without the need to modify external components. The WRF1231H is optimized for low power consumption while offering high RF output power and channelized operation. TrueRF™ technology enables a low cost external component count whilst still satisfying ETSI and FCC regulations.
