

## DUAL OPERATIONAL AMPLIFIERS

### GENERAL DESCRIPTION

The LM358A consists of two independent, high-gain, internally frequency-compensated operational amplifiers, which were designed specifically to operate from a single power supply over a wide range of voltages. The device operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. Its application areas include transducer amplifiers, dc gain blocks and all the conventional operational amplifier circuits.

### FEATURES

- Wide range of supply voltages
- Low supply current drain independent of the supply voltage
- Low input biasing current
- Low input offset voltage and offset current
- Input common-mode voltage range including the Ground
- Differential input voltage range equal to the power supply voltage
- DC voltage gain 100 V/mV (typ.)
- Internal frequency compensation

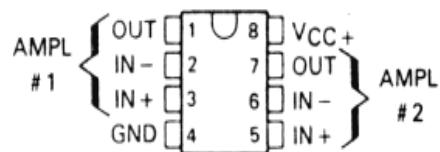

### APPLICATIONS

- Transducer amplifiers
- Dc gain blocks
- Conventional op-amp circuits in single power supply systems

## Typical Single-Supply Applications

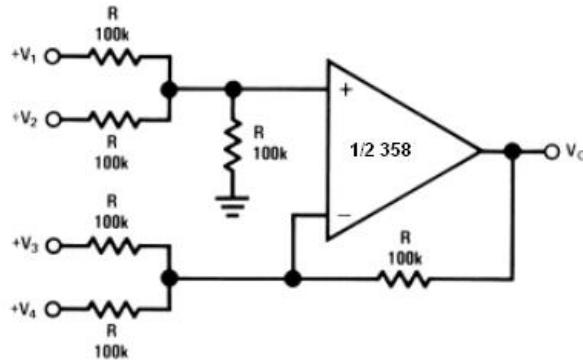

( $V^+ = 5.0 \text{ V}_{\text{DC}}$ )

### Non-Inverting DC Gain (0V Output)

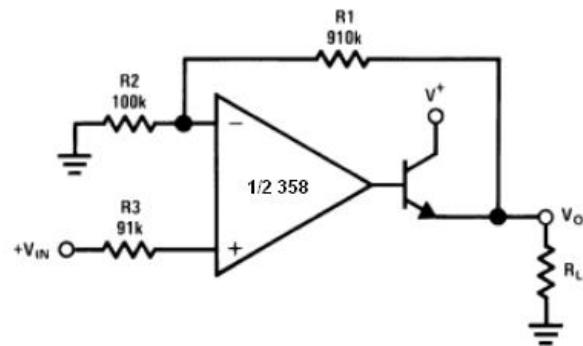

\*R not needed due to temperature independent  $I_{IN}$

### DC Summing Amplifier ( $V_{IN's} \geq 0 \text{ V}_{\text{DC}}$ and $V_O \geq 0 \text{ V}_{\text{DC}}$ )

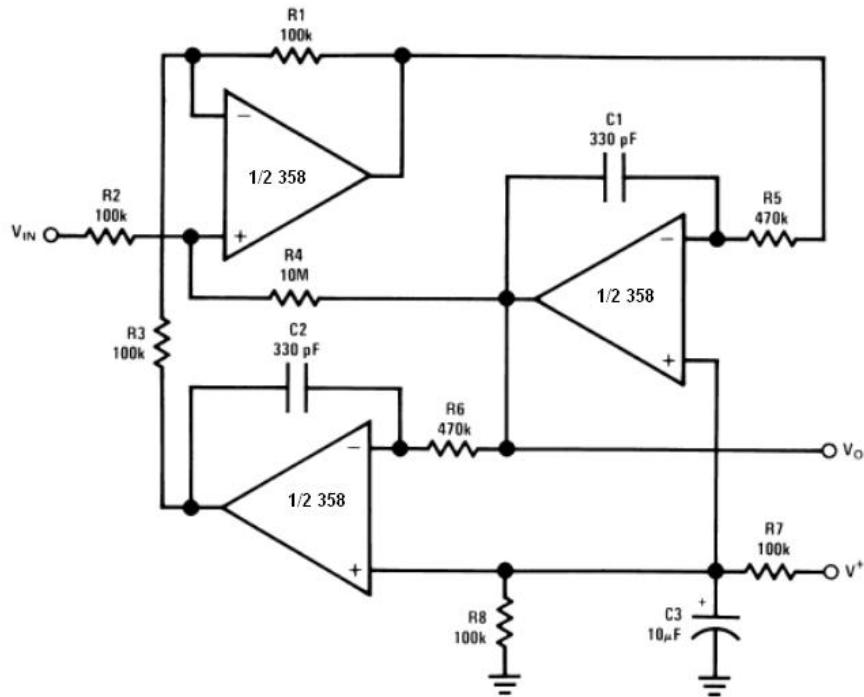

Where:  $V_O = V_1 + V_2 - V_3 - V_4$   
 $(V_1 + V_2) \geq (V_3 + V_4)$  to keep  $V_O > 0 \text{ V}_{\text{DC}}$

### Power Amplifier

$V_O = 0 \text{ V}_{\text{DC}}$  for  $V_{IN} = 0 \text{ V}_{\text{DC}}$   
 $A_V = 10$
