LITHIUM-ION RECHARGEABLE BATTERY

CDECIEIC ATIONS

SPECIFICATIONS		
	LI21700	
	Lithium-Ion rechargeable battery	
	4000 mAh (Min. 3800) at 800mA continuous discharge (new cell, temp. 20±5°C)	
	3.70 Volt (After charge)	
	3.00 Volt	
	95g (bare cell)	
	Typ. 500 standard charge/discharge cycles, ~70 Using dedicated CC/CV (4.2+/-0.03V) battery	
	Charging with CC (Constant Current) to 4.2V,	
	charge with CV (Constant Voltage) till charge of	
	Standard - 800 mA x 6 hours (Ref.)	
	Quick - Max. 4000 mA x 2.5 hours (Ref.)	
	Max. discharge current 4000mA	
	Discharge capacity varies with discharge curre	
	Standard charge 0° C to 45° C (battery perform	
	Discharge -20°C to 60°C (battery performance -20°C to 35°C, RH 65±15% (within 1 months)	e varies with temperature)
	$20\pm5^{\circ}$ C, RH 50-70% (long term)	
	Battery without PCM to be recharged every 6 mon	ths
	Battery with PCM to be recharged every 3 months	
	Other IQC standard must be mutually agreed.	
	IQC Date : within 30 days after shipment of battery	
	Outer Dimensions : with caliper (Sampling S-4 AQ	(L 2.5)
	Appearance : visual (Sampling G-II AQL 2.5)	
	Open Circuit Voltage : voltmeter (Sampling S-4 AC Capacity : 800mA continuous discharge after stand	2L 0.65) and charge at $20\pm5^{\circ}C$
	capacity : soomA continuous discharge after stand	and charge at 20±5 C

LITHIUM-ION RECHARGEABLE BATTERY

PROPER USE AND HANDLING

performance and safety.	attery should employ appropriate cautions in order to obtain optimum
Charging	 Charging current should less than the maximum charging current specified in the specification Charging voltage must up to the voltage specified in the specification Do not charge battery over the specified time in the specification Charging temperature should be within the specified range in the specification Reverse charging should be strictly prohibited Improper charging may generate heat, smoke, rupture or flame, and cause damage to the battery
Discharging	 Discharging current should be less than the maximum discharging current specified in the specification Discharging temperature should be within the specified range in the specification Do not over discharge the battery below 2.75V/cell Over discharge may occur by self-discharge if the battery is left for a very long time without any use Improper discharge may cause loss of performance
Storage	: Storage temperature should be within the specified range in the specification Storage is recommended in low humidity, nop corrosive gas atmosphere Long term storage may cause loss of capacity
Cycle Life	: Cycle life differs by conditions of charging, discharging, operating temperature and/or storage condition Level of capacity differs by cycles of battery used
Product Design	 Do not solder directly on bare cell Battery should be positioned far from heat source and heat components Appropriate shock absorber should be equipped to minimize shock on the battery Protection circuit against overcharge, over discharge, over current should be equipped to insure safety in case of misuse Battery should be designed to connect only to specified charger and system Reverse connection of battery should be avoided in system design Improper product and system design may cause loss of battery performance
Product Assembly	 Battery cell should be inspected visually before product assembly to avoid usage of damaged cell (for example, sleeve damage, battery distortion, or leaking) Excessive force on the battery terminals and battery surface should be avoided Precaution should be taken when battery is moved / transported to other place Do not disassembly, short-cutcuit, incinerate, immersion in water, and mix use of battery Battery should be disposed in discharged state Improper handling may cause loss of battery performance
Warning	: The battery may present risk of fire and chemical burn if mistreated. Keep away battery from children.

Information is for reference only and is not construed as warranties either expressed or implied, of future performance. Performance varies with time, usage and storage condition. 1 year limited guarantee against manufacturing defects. Other problem caused by misuse, mishandling of cell, or malfunction of equipment, is not under the warranty.
